

(a) Noising path

(b) Several compatible branches

single-valued field returns

$$v^*(y, t) = \mathbb{E}[U \mid Y_t = y]$$

$$A_v = A_{\text{within}} + A_{\text{between}}$$

$$R_{\text{switch}} = A_{\text{between}} / A_v$$

A_{between} measures
branch disagreement

(c) Diagnostic readout
